TCB Control Block Sharing: 2140bis

draft-touch-tcpm-2140bis-02
IETF 98 - Chicago

Joe Touch, USC/ISI
Michael Welzl, U. Oslo
Safiquil Islam, U. Oslo
Jianjie You, Huawei
Changes from -01

• Addressing comments from IETF-97
  – Correctly reflected Linux sharing of old_RTT in implementation overview table
    Comment from Yuchung and Jana
  
  – Discussed correct host identification: NATs may make IP addresses the wrong input, could e.g. use HTTP cookie
    Comment about granularity of sharing from Yuchung
  
  – Marked entries that are considered safe to share (Initial suggestion was to split the table)
    Comment from Lars and Jana
Changes from -01

• Other changes
  – Clarified our OS impl. overview only covers temporal sharing
  – Moved T/TCP text to the appendix
  – Split MSS into existing terms MMS_S, MMS_R, sendMSS [RFC1122]
  – Fixed the use of MSS and MTU
  – Added information about option sharing (listed options in appendix)
Next steps

• Request for TCPM WG adoption

• BCP or Informational?
  – Well, we really incorporate “best current practice” into the doc...
  – Suggest targeting BCP, with final decision based on final content, using the preferred target to scope WG discussion
