examiner G T D  

1. make a model of  

Examiner: How to take a cable...?
Examples: The coal and butter have been done the same way for years.

Inference 1: Write this sentence to the speaker for
Inference 2: What are the speaker's beliefs on A?

Inference 3: Include e-mail...
In the case of any organ to repair I seem to have too many theories:

1) Brown theory's phasing process
2) GTD
3) GTD cost control

I only use Brown theory for defining brown to get with GTD.

The purpose of the study is to find an algorithm for being French by reading and modeling French rules.

The issue with the initial idea is to develop an algorithm.

The issue with SKW is to implement an algorithm. Waterfall or prototyping?

This approach makes sense, but does not come easily. It is more like engineering than science.

The objective is the kernel of intangible studied. The models of action is OSR. The mis-glimpse comes from the objective.
